Pisay ASAP!☆

Pisay ASAP!☆

ESPAÑO | NICDAO | ROMERO | SARMIENTO | VILLALON
8 - SAMPAGUITA

RATIONALE

Many students and staff in PSHS-CALABARZONRCIBC often use the canteen and co-op when ordering their daily food; with this, long lines tend to appear during lunch or break times, eventually leading to many scholars feeling disappointed with what meals are left at the counter.

Studies show long lines when trying to order food can make customers feel impatient and order faster, and not order their previously desired option due to the rush. With the rise of pre-ordering applications for food restaurants, queue time and queue lines decrease. Pre-ordering reduces queue length in approximately 94.8% of restaurants (Robbins, 2021). In the Philippines, applications including GrabFood and Foodpanda can make customers pre-order and walk in for their food using their app, greatly reducing wait times for customers.

In PSHS-CALABARZONRCIBC, the same solutions that other companies and restaurants have made can be transferred to the canteen and co-op. Making a pre-ordering application can not only be beneficial for scholars and staff, but also for the canteen workers. It would make longer lines appear shorter, ordering food faster and easier, and an efficient way to grab your food and go.

PROJECT OVERVIEW & RELEVANCE

Pisay ASAP!☆ is a pre-order food system for PSHS-CALABARZONRCIBC scholars and staff. The program runs on the coding program Python with the intent of cutting down on long waiting times and making ordering canteen and Co-Op food more accessible.

Pisay ASAP!☆ has a database, which has 5 items: First, the usernames, which is the user's first and last name. Usernames and passwords can be doubled, but the student ID numbers cannot. Another part of the database are the snacks, meals, and drinks, as well as the prices of these items.

For data analysis, the program will calculate the total price of the user's purchases in the form of a digital receipt, adding along with it the payment method and where the user may pick up their food.

OBJECTIVES (DAN)

METHODOLOGY/TECHNICAL APPROACH

1. **Log-in/Sign-up Page**

❖ The user has the option to ***sign up***, to create a new account in the program, or to ***log in*** to access an existing account in the program after starting the program.

➢ [1] *Log-in Page*

- If the user chooses to ***log in***, they shall enter their corresponding correct credentials, such as their username and password, but if the user enters the incorrect credentials, they shall try again until the credentials are correct, or go back to the *Log-in/Sign-up Page*.
- If the user wishes to return to the *Log-in/Sign-up Page,* the user should input "exit".

➢ [2] *Sign-up Page*

- If the user chooses to ***sign up***, they shall first enter their SURNAME and FIRST NAME, then input their password. The user will then be redirected back to the main *Log-in/Sign-up Page.*
- If the user wishes to return to the *Log-in/Sign-up Page,* the user should input "exit".

➢ [3] *Close*

- The user is given the option to return to the *Log-in/Sign Up Page* after choosing either *log-in* or *sign-up*.

❖ After finishing the page, the user shall proceed to the *Order Information Page* or the *Main Menu*.

2. Main Menu/Order Information Page

❖ The user chooses their food category and can add their selected food to their *tray*.

➢ [1] *Snacks*

- If the user chooses option 1, they can choose between light-weight snacks that are perfect for replenishing their stamina.
- Users are able to add drinks to their *tray* based on their preferences, after choosing their snack/s.
- The user will be redirected to the Main menu.

➢ [2] *Meals*

- If the user chooses option 2, they can choose between heavy meals that are perfect for breakfast, lunch, or dinner.
- Users can add extra rice to their *tray* if they want to, after choosing their meal/s.
- The user will be redirected to the Main menu.

➢ [3] *Checkout*

- After finalizing their tray, the user will be shown the total price of their order. They will choose their payment method (cash, GCASH), be able to check out, and then pay for their food. Afterwards, a printout of the receipt will show on their screen.
- The program will close.

➢ [4] *Exit*

- The user may exit the program anytime.

        elif foodchoice == "2":
            for food, price in meals.items():
                print(f"{food}: Php {price}.00")

            while True:
                mealchoice = input("\nPick your Meal (or 'back'): ").title()

                if mealchoice == "Back":
                    break
                if mealchoice in meals:
                    tray.append({"itemName": mealchoice, "itemPrice": meals[mealchoice]})
                    print("Added {mealchoice} to your tray!\n")
```

11. Rice selection

```python
# Rice Selection
for riceName, ricePrice in rice.items():
    print(f"{riceName}: Php {ricePrice}.00")
ricechoice = input("\nPick your Rice: ").title()
if ricechoice in rice:
    tray.append({"itemName": f"Rice ({ricechoice})", "itemPrice": rice[ricechoice]})
```

12. Drinks add-on

```python
        # Drinks add-on
        addDrinksChoice = input("\nAdd drinks? [Y/N]: ").upper()
        if addDrinksChoice == "Y":
            for drinkName, drinkPrice in drinks.items():
                print(f"{drinkName}: Php {drinkPrice}.00")

            drinkadd = input("\nDrink choice: ").title()
            if drinkadd in drinks:
                tray.append({"itemName": drinkadd, "itemPrice": drinks[drinkadd]})
        break
    else:
        print("\nSorry! {mealchoice} is not on the menu. Please try again.\n")
```

13. Payment & Final Receipt

```python
# Payment choice, bill calculation, final bill
elif foodchoice == "3":
    finalTray, finalTotal, chosenMethod = payment(tray)
    if finalTray:
        receipt(loggedinuser, finalTray, finalTotal, chosenMethod)
    else:
        continue
```

14. Exiting the program

```python
# exits the program
elif foodchoice == "4":
    print("See you again! Speedy services only here at Pisay ASAP!")
    break
```

15. Error handling

```
    except (ValueError, TypeError):
        print("\nInvalid choice. Please Try Again.")
```

Final ReadMe

PISAY ASAP!☆

Description

- Pisay ASAP!☆ is a program developed by Grade 8 Sampaguita's Group 6, under the subject Computer Science 2 and subject teacher Ma'am Marbecel Florida. Pisay ASAP!☆ is a program aiming to eliminate long lines by allowing students and staff to pre-order and pay for food, specifically snacks and full meals, specifying a pick-up time.

Objectives and Purpose

Pisay ASAP!☆ aims to:

1. Provide PSHS-CALABARZON RC students, faculty, and staff an easy system to pre-order food at the school cafeteria and/or Co-Op,

2. Let users find out the available meals and snacks on that day with a user-friendly interface,

3. Cut down on long lines caused by indecisive buyers,

4. And finally, save time for the canteen workers, staff, and scholars.

Relevance and Usefulness

Pisay ASAP!☆ helps PSHS-CALABARZON scholars and staff easily pre-order and pick up food from the canteen and co-op. Pisay ASAP!☆ can reduce waiting lines during events, and everyday break periods of scholars and staff. By simply pre-ordering from Pisay ASAP!☆, you can pick up your order at the canteen or co-op at any specified time.

Program Set-up Guide

1. Download Python

- The main programming language of **Pisay ASAP!☆** is Python; thus, the user must first download the programming language to access the program.
    - **Note:** The programmers recommend the user to download the most recent version of

Python, which as of now is 3.14.

2. Sign up and Create an Account

- *Sign up* in the Log-in/Sign-up Page to create an account in the program, and to start your journey in **Pisay ASAP!☆**
    - *Note:* If the user already has an existing account in the program, then the user only needs to *log in* to access their existing account.

3. Choose Food Category and Food

- After finishing the *Sign-up/Log-in page*, the user will be redirected to the Order Information Page/Main Menu, where they shall choose their food category, meals or snacks.
- The user can choose from a variety of food, and they can add these to their tray, but they can still, later on, remove them.
- Users can choose drinks after choosing their *snacks*
- Users can choose to add rice after choosing their *meal*.
- If the user chooses an invalid food, they will be redirected back to the Main Menu.
    - *Note:* In the main menu, the user has the option to exit the program.

4. Checkout

- After the user finalises their tray, they can choose to check out and pay, and then a receipt for their tray will be shown.
